

## Put the airport timetable on your mobile

**Do you need information on the next available flights to and from Munich when you're on the move? Do you need details of routes and flights available in Munich? Would you like to be able to access this information without powering up your PC or calling a travel agent? If so, our daily updated airport timetable for mobile phones and PDAs is the right service for you.**

To use our mobile timetable service, all you need is a WAP-enabled mobile phone or handheld device that supports WAP Version 2.0 (XHTML)\*. Most current mobile communications devices do, but check your owner's manual to see whether your device is capable of accessing our timetable service. You will not be available to use the service on equipment that only supports WAP Version 1.3.

If your device is configured for WAP services, enter this address:

**<http://www.muc.aero/flight>**

This displays a screen in which you can query the airport timetable. The menu system is self-explanatory.

If your device supports WAP 2.0 but has not been enabled for WAP services, you can configure it on the Internet. You can do this free of charge here at this portal:

[www.mload.de](http://www.mload.de) → handy\_einstellungen

Follow the instructions to set up your mobile phone for WAP services.

WAP services are not free. Contact your provider for information on charges.

We hope you enjoy using our mobile timetable service!

Flughafen München GmbH

\* Problems may occur when accessing the airport timetable on older WAP 2.0 enabled mobile phones or handheld devices with low memory capacity. If you encounter difficulties when using the program, please send details of your phone or device to [flugplan@munich-airport.de](mailto:flugplan@munich-airport.de). This will help us to improve our mobile timetable service. Thank you.
